

Microsoft

Exam MB6-704

Microsoft Dynamics AX 2012 R3 CU8 Development Introduction

Version: 7.0

[Total Questions: 90]

Question No : 1

You need to provide a user from Active Directory with access to Dynamics AX. The user will access Dynamics AX by using the Dynamics AX client. The user will be an internal user.

In addition to the users functional role, which two roles should you assign to the user? Each correct answer presents part of the solution.

- A. Manager
- B. Guest
- C. Employee
- D. Claims user
- E. System user

Answer: C,E

Question No : 2

You are developing X++ code to update multiple records as a single transaction. The records are located in several tables.

You need to ensure that if an update of one of the records fails, none of the records update.

What should you use?

- A. Try and catch
- B. Tts begin and tts commit
- C. Insert record set and tts abort
- D. For update and tts abort

Answer: B

Question No : 3

You need to write X++ code that is common to both the CustTable table and the Vend Table table. The solution must minimize the duplication of code.

What should you do?

- A. Modify CustTable to add all of the fields in Vend Table. Write X* + code that uses CustTable.
- B. Create a view that includes the fields in both CustTable and Vend Table. Write X+ + code that uses the view.
- C. Create a table that extends from CustTable and Vend Table. Write X+ + code that uses the new table.
- D. Create a map that links CustTable and Vend Table. Write X++ code that uses the map.

Answer: D

Question No : 4

You have a table named Vend Table that contains a field named Main Contact Worker. Main Contact Worker is the reference Recid. Many records in the Vend Table table have the same value for Main Contact Worker.

Users frequently search for data in the Vend Table table based on the Main Contact Worker field.

You need to ensure that when the users create queries that include the Main Contact Worker field in the where clause, the query results are returned in the least amount of time possible.

What should you create in Vend Table?

- A. A unique index in Main Contact Worker
- B. A surrogate key that is used as the primary index
- C. A primary index for Main Contact Worker
- D. A non-unique index in Main Contact Worker

Answer: B

Question No : 5

You need to set the code permission of an action menu item.

Which property should you use?

- A. Linked Permission Object
- B. Configuration Key
- C. Needed Access Level
- D. Web Secure Transaction

Answer: A

Question No : 6

You have the following X++ code that contains an SQL statement:

```
Connection userConnection;
Statement stmt;
Str sqlString;
Resultset results;

userConnection = new Connection();
stmt = userConnection.createStatement();
sqlString = "select * from SalesTable";
new SqlStatementExecutePermission(sqlString).assert();
results = stmt.executeQuery(sqlString);
CodeAccessPermission::revertAssert();
```

Which two statements accurately describe the code?

Each correct answer presents a complete solution.

- A. The code does not enforce field-level security.
- B. The results variable only contains data from the partition in to which the user is logged.
- C. The code does not enforce row-level security.
- D. The results variable only contains data from the legal entity in to which the user is logged.

Answer: C,D

Question No : 7

You have two data sources named Items and Item Details. There is a relationship between

the data sources. Item Details contains detailed information about each item in Items.

You plan to create a form that contains two grids.

You need to configure the form to display the details of an item when the item is selected.

What should you set?

- A. The Link Type of Items
- B. The Join Source of Items
- C. The Link Type of Item Details
- D. The Join Source of Item Details

Answer: D

Question No : 8

You create a duty to maintain customer master information.

You need to identify to which elements you can add the duty.

Which two elements should you identify? Each correct answer presents a complete solution.

- A. Process Cycles
- B. Policies
- C. Permissions
- D. Privileges
- E. Roles

Answer: C,D

Question No : 9

You have a menu item named menu item 1 that is used to launch a form named Form 1 by using the rich client.

You need to ensure that users who are granted the Maintain customer addresses privilege

can use menu item I to open Form I in read mode.

What should you do?

- A. Set menu item I to run on the server. Modify the Enabled property of the Maintain customer addresses privilege.
- B. Create an entry point for the Maintain customer addresses privilege. Set the Access Level property of the entry point
- C. Create an entry point for the Maintain customer addresses privilege. Add Form I to the Maintain customer addresses privilege.
- D. Set menu item I to run on the server. Add Form I to the Maintain customer addresses privilege.

Answer: B

Question No : 10

A table named Table 1 has a string field named Account Num.

You have an instance of Table 1 named table1.

You need to print the value of Account Num to the info log.

Which code segment should you use?

- A. Info (table1. Get Account Num ());
- B. Info (table1.Account Num());
- C. Info (int2str (table1. Account Num));
- D. Info (table1. Account Num);

Answer: D

Question No : 11

You are creating an extensible data security (XDS) policy.

You need to return the data from the primary table that will be used to filter the data in a

constrained table.

What should you use?

- A. The Code profiler
- B. Code permissions
- C. Secured APIs
- D. A policy query

Answer: D

Question No : 12

You need to add a duty to the Accounts receivable manager role.

What are two possible menus or nodes that can be used to achieve this goal? Each correct answer presents a complete solution.

- A. The Setup menu from Organization administration
- B. The Setup menu from Accounts receivable
- C. The Security node in the Application Object Tree (AOT)
- D. The Setup menu from the System administration module

Answer: C,D

Question No : 13

You work in a shared development environment. You frequently use private projects.

Which statement accurately describes the private projects?

- A. Changes made to the objects in the private projects are visible only to the user who creates the projects.
- B. Private projects can have only one version in source control.
- C. Other users can be granted access to the private projects by using security roles.
- D. Private projects are visible only to the user who creates the projects.

Answer: D

Question No : 14

You need to create a new extensible data security (XDS) policy.

What should you use?

- A. A map
- B. A part
- C. A query
- D. A job

Answer: C

Question No : 15

You have the following X++ statement:

```
Int variableA, variableB;
Int _parameter = 3;

Try
{
    while(variableA < _parameter)
    {
        if(variableA == 1)
        {
            break;
        }
        else if(variableA > 2)
        {
            throw error("Variable2 cannot have value greater than 2.");
        }
        variableA++;
    }
    if(variableB < variableA)
    {
        error("Wrong value of variableB variable.");
    }
}

Catch (Exception::Error)
{
    error("Process was aborted.");
}

Catch (Exception::Break)
{
    error("Process was cancelled.");
}
```

- A. Wrong value of variable B variable.
- B. Wrong value of variable B variable. Process was cancelled.
- C. Variable2 cannot have value greater than 2. Process was aborted.
- D. Process was cancelled. Wrong value of variable B variable.

Answer: A

Question No : 16

Last Name is a field in a table. The length of the field is modified at different layers as follows:

- ✓ At the SYS layer, the field is set to 20 characters.
- ✓ At the USR layer, the field is set to 60 characters.
- ✓ At the CUS layer, the field is set to 40 characters.
- ✓ At the VAR layer the field it is set to 10 characters.

At runtime, what will be the length of the Last Name field?

- A. 40
- B. 10
- C. 20
- D. 60

Answer: D

Question No : 17

You need to set the permissions of an action menu item.

Which property should you modify?

- A. Web Secure Transaction
- B. Needed Access Level
- C. Configuration Key
- D. Linked Permission Type

Answer: D

Question No : 18

You have two tables named Table1 and Table2. There is a relationship between the tables.

You need to display data from both tables in a form.

How should you create the data source for the form?

- A. Add both tables to a perspective and use the perspective as the data source.
- B. Create a new table named Table3 that is related to Table1 and Table2. Use Tables as the data source.
- C. Add both tables to a map and use the map as the data source.
- D. Add both tables to a query and use the query as the data source.

Answer: D

Question No : 19

You have the following X++ statement:

```
Int variableA, variableB;  
;  
Try  
{  
    variableA = 5;  
    variableB = 20;  
    variableB -= variableA;  
  
    if(variableB > variableA)  
    {  
        throw error("An error has occurred.");  
        error("VariableB cannot be less than variableA.");  
    }  
}  
  
Catch (Exception::Error)  
{  
    error("Process was aborted.");  
}
```

You need to identify the output of the statement.

What should you identify?

A. An error has occurred.

Variable B cannot be less than variable A.

Process was aborted.

B. An error has occurred.

Process was aborted.

C. An error has occurred.

Variable B cannot be less than variable A.

D. Variable B cannot be less than variable A.

Process was aborted.

Answer: B

Question No : 20

You need to add a menu item to a list page.

To which pane should you add the menu item?

A. Preview

B. Action

C. Filter

D. Fact Box

Answer: B

Question No : 21

You develop a Microsoft SQL Server Reporting Services (SSRS) report for a customer.

You need to ensure that the report is available in Dynamics AX.

Where should you save the report?

A. The Dynamics AX model store

B. The SSRS server

C. The Application Object Server (AOS)

D. The Dynamics AX clients

Answer: B

Question No : 22

You are developing X++ code to retrieve data from a table named Table I.

You need to use a select statement to retrieve only records from Table I that have related records in a table named Table2.

Which type of join should you use?

- A. Inner
- B. Exists
- C. Outer
- D. Not exists

Answer: A

Question No : 23

You have the following X++ code: (Line numbers are included for reference only.)

```
01 public class Class1
02 {
03     int var1;
04 }

05 public void method1()
06 {
07     var1 = 5;
08 }

09 public void method2()
10 {
11     var1 = 10;
12 }

13 public class Class2
14 {
15 }

16 public void method3()
17 {
18     Class1 c1 = new Class1();
19     Class1 c2 = new Class1();
20     c1.method1();
21     c2.method2();
22
23     info("done");
24 }
```

Method1 and method2 are in Class1. Method3 is in Class2.

You need to identify the value of var1 for the c1 object when the execution of the code reaches line 22.

Which value should you identify?

- A. 10
- B. Undefined
- C. 0
- D. 5

Answer: D

Question No : 24

You need to replace a value from a specific position of a container

Which function should you use?

- A. ConDel
- B. ConPoke
- C. ConFind
- D. ConNull

Answer: B

Question No : 25

You need to identify which elements the Reverse engineer tool will provide for a data model.

Which three elements should you identify? Each correct answer presents part of the solution.

- A. Table methods
- B. Classes
- C. Table fields
- D. Base enumerations
- E. Extended data types (EDTs)

Answer: C,D,E

Question No : 26

You have a table namedTable1that contains the information from a sales invoice.

ForTable1, you need to create a method named Tax Amount that will return the total amount of tax for the invoice. The method will be used in a report to show the tax amount information.

Which type of method should you use?

- A. Static
- B. Accessor
- C. Main
- D. display

Answer: A

Question No : 27

You have three tables named Table 1, Table2, and Table3. Table2 and Table3 extend from Table 1.

You define a method on Table2 and you define a field on Table 1.

You need to identify on which tables the field and the method will be available.

Which two options should you identify? Each correct answer presents part of the solution.

- A. The field will be available on Table 1 only.
- B. The field will be available on Table 1, Table2, and Table3.
- C. The method will be available on Table2 and Table3 only.
- D. The method will be available on Table2 only.
- E. The method will be available on Table 1, Table2, and Table3.

Answer: B,D

Question No : 28

You are developing queries to fetch data from the CustTable table. CustTable contains a field named City. There is a non-unique cluster index named city_idx in the City field.

You need to fetch data from CustTable in ascending order based on City.

What are three possible SQL statements that achieve this goal? Each correct answer presents a complete solution.

- A. Select CustTable order by city ASC;
- B. Select CustTable index city;

- C. Select CustTable index city Idx;
- D. Select city From CustTable;
- E. Select CustTable order by city;

Answer: A,D,E

Question No : 29

You are developing a solution to get a date as an input to perform an operation. The input will be in a variable named input Date.

You need to validate the date and throw an error if the date entered is null or greater than the current system date.

Which X++ statement should you use?

Exhibit A

```
If(InputDate != datenull())
{
    Throw error("Wrong selection of date");
}
If(inputDate > systemDateGet())
{
    Throw error("Wrong selection of date");
}
```

Exhibit B

```
If(InputDate != datenull())
{
    Throw error("Wrong selection of date");
}
Else If(inputDate > systemDateGet())
{
    Throw error("Wrong selection of date");
}
```

Exhibit C

```
If(InputDate != datenull())
{
    Throw error("Wrong selection of date");
    If(inputDate > systemDateGet())
    {
        Throw error("Wrong selection of date");
    }
}
```

Exhibit D

```
If(InputDate == datenull() || inputDate > systemDateGet())
{
    Throw error("Wrong selection of date");
}
```

- A. Exhibit A
- B. Exhibit B
- C. Exhibit C
- D. Exhibit D

Answer: D

Question No : 30

You plan to create a Fact Box based on a query that queries a table.

You need to ensure that all of the fields in the table are available to the Fact Box.

What should you do?

- A. From the Fields node of the form's data sources, set the Dynamic property to Unselected
- B. From the Fields node of the table, set the Dynamic property to Yes.
- C. From the Fields node of the query's data sources, set the Dynamic property to Yes.
- D. From the Fields node of the table, set the Dynamic property to Unselected.

Answer: B

Question No : 31

You are developing a solution that will delete some records from a specific table.

You need to add a button that has delete logic on a Click event. Users must be prompted for input in the form of Yes or No before executing the delete operation.

What are two possible communication tools you can use to achieve this goal? Each correct
